Low Cost technoBOX Enclosures from ROLEC

ROLEC's technoBOX range features an attractive modern design including a bevelled lid, clean lines and easy assembly, all at very competitive prices, which start at just £5.

technoBOXES are available in seven sizes ranging from 66x51x35mm up to 241x161x80mm. The range is moulded in halogen-free ABS or, on request, polycarbonate. The standard colour is light grey RAL 7035, however, special colours can also be moulded.

With a protection class of IP 66, and fully insulated to VDE 0100, this range of enclosures is ideal for housing industrial electronics/electrical devices for indoor or even outside applications. The lid is recessed to allow easy location of membrane keypads, front panels or polycarbonate product labels

All internal and external fastening points are compatible with industry standard dimensions. Internal screw pillars can be used for fitting mounting places, PCBs and terminal assemblies. The sides can also be easily machined for cable glands.

Accessories include mounting plates, external mounting brackets, front panels, feet, lid hinges and terminal rails.

ROLEC can customise these enclosures with holes and cut-outs, silk-screen printing and much more to provide a finished enclosure ready for assembly of the components and assemblies.

More information on these enclosures can be found on ROLEC's website at
